

FUEL SAVER

Giving You More Mileage.....For Life

10 Benefits from this technological breakthrough device:

- ◆ Guaranteed mileage improvement
(effectiveness that is legendary to our product)
- ◆ Increased horsepower (power booster)
- ◆ Reduced visible black smog and toxic gas emission
- ◆ Smoother engine operation
(less vibration & noise - the most immediate sensation)
- ◆ Easy engine startup
- ◆ Cleans your engine on the fly (bonus feature!)
- ◆ Protects and Prolongs engine parts (extends the service life of the parts)
- ◆ Maintenance FREE!!! "lowest Total-Cost-of-Ownership ever!"
- ◆ Fully transferable
- ◆ The ultimate investment for your vehicle (shortest Return-of-Investment!)

- ◆ 可节省燃油高达20%
- ◆ 永久保证产品有缺陷1:1更换
- ◆ 安装简易,只需几分钟
- ◆ 提升马力
- ◆ 消除黑烟及含有毒的废气
- ◆ 使引擎更顺畅
- ◆ 保持引擎干净
- ◆ 不需保养
- ◆ 短期回本
- ◆ 环保产品

- ◆ Jimat petrol/diesel sehingga 20%
- ◆ Jaminan sepanjang hayat.
- ◆ Berkualiti tinggi dan terbukti keberkesannya
- ◆ Mudah dipasang / dipindahkan ke kenderaan lain
- ◆ Menambahkan kuasa serta merta
- ◆ Mengurangkan pengumpulan kerak karbon pada enjin
- ◆ Pulangan kos yang cepat
- ◆ Sesuai untuk semua jenis kenderaan petrol/diesel/gas
- ◆ Tiada kos penyelenggaraan alat
- ◆ Enjin sangat mudah dihidupkan, terutama waktu sejuk
- ◆ Mengurangkan kos pembaikan enjin
- ◆ Tiada pengubahsuaian enjin

The Magic

Fuel combustion is NEVER complete for all vehicles. That why we can smell petrol and see black smoke from our exhaust pipes. All good money gone to waste.

Now's your chance to solve this problem once and for all.

Introducing
FUEL SAVER
a product of USA

Works with all vehicles,
any make, model and year
and of course all fuel types
(Petrol, Diesel, LPG & CNG)!

FUEL SAVER

February 2006 Edition (Volume 52)

Malaysians love to drive cars. We find all sorts of reasons for the chance to be behind the wheel – be it for a leisure weekend rendezvous in and out of the city or getting to a secluded fishing spot in the middle of no-where or drive the entire family to far away places small wonder that we have as many as 1 active vehicle for every 2 Malaysians.

However, this addition to "freedom" is becoming dearer in recent times. The escalating global fuel price throughout last year has undoubtedly left big holes in our pockets. And to rub salt to the wound, our Government has hinted that the fuel subsidy will eventually have to go away in not too far a distance, paving way to an even higher fuel price.

Hence, when MLM Vision Enterprise, Mr Teoh Beng Wang presented their Fuel Saver – with total satisfaction guaranteed, we jumped at the first opportunity to test it out. Let's face it, there are a number of fuel saving devices in the market today. Many frustratingly could not live up to what they claimed to be, only few could. However, these few that could actually save fuel cost hundreds of Ringgit. The Fuel Saver (and that's a brand name!) on the other hand, is currently being sold at a promotional price of only RM128 per set.

Fuel Saver comes in a pair of advanced-precision-doped magnets that produces high quality, high intensity and extremely directional magnetic flux – the vital and necessary properties to save fuel. But let's talk about my test result first, the working theory can come later ...

It took me just 3 minutes to clamp the magnets together and I was ready to test it out! But I have to admit to find the right fuel pipe to clamp Fuel Saver was a challenge. Nevertheless, a trip down to my friendly-neighbourhood mechanic solved the problem immediately, and at no extra cost! Thanks Keong!

Now the rubber hits the road. On my first test, I use my regular travel route from Kajang to PJ. I must admit, the immediate sensation I felt from my fuel guzzling Toyota Unser was a smoother power delivery. The difference is truly pronounced. This experience of getting back the extra power was, in my humble opinion, already worth the RM128!

So after 1 week of testing, what did I get? Before Fuel Saver installation, I was doing 18 sen per kilometer. With Fuel Saver, the fuel economy improved to 15.8 sen a kilometer. That's an amazing 12.2% savings. As a matter of fact, I was able to achieve this savings consistently in the last 2 full tank. In an ordinary month, I travel about 3000 kms. If I can consistently achieve 12.2% savings, that translates to an extra RM66 cash into my pocket each month! In a year, that would mean a free trip to Penang with my family for 3 full days! I'm excited already at the possibilities!

So, what is the magic behind Fuel Saver? According to MLM Vision Enterprise, fuel burning inside the engine is never complete. That's why we can smell petrol coming out from our exhaust pipe. This means petrol is wasted and pollutes the air we breathe in. Combustion is never complete due to non-optimized fuel structure when it flows into the engine. Fuel Saver optimizes this petrol chemical structure to achieve a more complete combustion, thus giving more mileage and power. What it does is to break down the complex and entangled structure for easier burning. It also ionizes the petrol molecules to become cationic so that they become highly reactive to react with air to achieve complete combustion.

The magnets are specially made from USA to withstand high temperature and would not lose its strength significantly over time. It also does not adversely affect the electronics in the vehicle when installed correctly. I'll be conducting more tests to statistically prove beyond the shadow of the doubts that Fuel Saver can live up to their own savings goals. So, look for this column in 2 months' time.

This Fuel Saver does look like a good bargain for money-conscious people. At RM128 per set.

FUEL SAVER
A Hope Amidst Fuel Price Increase

April 2006 Edition (Volume 54)

A Hope amidst Fuel Price Increase

The 30 sen increase for every liter of petrol really shocked the nation. Not because it was announced so suddenly, but more so of the unprecedented 18.5% steep raise. Naturally, this has caused widespread pain across the nation.

The repercussion was just as immediate. A quick survey among friends indicated all of them would be giving their ritual twice-a-year Penang trip a miss this year and settle for nearer destinations like Malacca and Port Dickson. Some even have decided to scale down the number of family outings from 4 to 2 each month. It is sad such petrol price increase have fundamentally changed people's mobility.

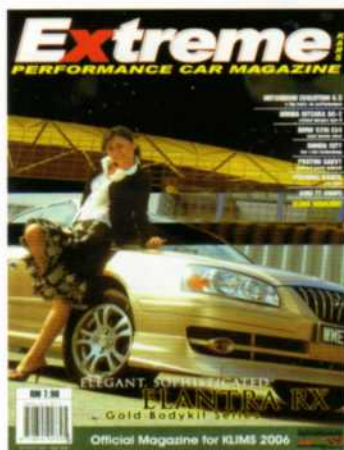

For me, the pinch is just as bad. Today, every visit to the petrol station would cost me no lesser than RM100 on my Unser. Put it in a year's perspective, I am expecting to spend around RM5,500 of petrol in the next 12 months!

Fortunately, there is Hope. The Fuel Saver that I have been testing for the last 2 months has proven itself to be a reliable life saver! Since the last article I wrote about this Fuel Saver (February Edition), I have been able to achieve a consistent average of 12.83% improvement in fuel economy. Although the percentage of savings is lesser than the fuel price increase, it sure brings a little consolation to the situation.

What's more, the additional power obtained through Fuel Saver gave me a delightfully smoother ride – a feeling that one can easily experience almost immediately after installation.

The Fuel Saver comes in a pair of "advanced-precision-doped magnets that produces high quality, high intensity and extremely directional magnetic flux – the vital and necessary properties to save fuel". It is made in USA and has special properties to withstand the high engine temperatures.

At a promotional price of only RM128 per set, it is definitely a bargain for every car owner. And did I mention the Fuel Saver also comes with a lifetime warranty?

Official Magazine for KLIMS 2006

Kenaikan harga petrol baru-baru ini ternyata telah menyebabkan berkalu perubahan ketara di kalangan pemilik kereta yang rata-ratanya kelihatan cuba mengurangkan jarak pemanduan serta penggunaan kereta mereka dalam usaha menjimatkan petrol. Namun bagi mereka yang terpaksa (lebih-lebih lagi mereka yang mempunyai pekerjaan yang memerlukan mereka banyak memandu) produk penjimatan petrol sememangnya menjadi pilihan. Namun dengan begitu banyaknya produk penjimatan petrol di pasaran masakini, pemilihan tidaklah semudah yang disangkakan!

Oleh yang sedemikian, pada keluaran kali ini dipaparkan satu produk penjimatan petrol yang telah diuji keberkesanannya oleh beberapa wakil media. Seperti namanya, produk yang dikenali sebagai Fuel Saver ini telah membuktikan keberkesanannya dalam menjimatkan penggunaan petrol dan pada waktu yang sama memberikan pemanduan yang lebih lancar. Ianya boleh dikatakan sebagai satu produk yang 'percuma' jika dinilai pada tahap penjimatan yang dihasilkan dalam jangka masa yang panjang!

Ia dikatakan mampu menjimatkan hingga 20% penggunaan petrol dan ini berdasarkan hasil ujian yang telah dilakukan terhadap sebuah kereta Kenari EZ selama 2 bulan. Sebelum pemasangan Fuel Saver, pengisian tangki penuh mampu bertahan sejauh 400km, namun setelah pemasangan Fuel Saver dibuat, ianya mencatatkan perjalanan sejauh 455km.

FUEL SAVER
The Solution to Save More!

May 2006 Edition

Fuel Saver dari USA ini didatangkan dengan pasangan magnet yang menghasilkan medan magnet berkualiti tinggi. Ya! Ini sememangnya salah satu ciri terpenting dalam usaha menjimatkan penggunaan petrol. Ianya kini dipasarkan pada harga yang amat berpatutan iaitu sekitar RM128 dan itu sudah tentu membuatkan ianya satu produk yang 'mesti-dimiliki'. Fuel Saver ini merupakan produk yang direka khas agar mempunyai ketahanan tinggi melawan suhu panas enjin dan ianya turut didatangkan dengan jaminan produk sepanjang hayat!
